AWARD-WINNING NOVEL EFFECT DEBUTS NEW PLATFORM, NEW FEATURES, NEW LOOK
INCLUDES CURATED LISTS, PERSONALIZED CONTENT, SOCIAL INTEGRATION

Seattle, WA — Novel Effect, the groundbreaking voice-driven entertainment company, announced today the release of their Novel Effect: Read Aloud Books app for Google Play. This release brings their patent-pending reading platform, which plays background music and sound effects synced to a storyteller’s voice as a book is read aloud, to millions of additional parents and educators who use Android devices.

“Since expanding our development team this Fall, our top priority has been to deliver an Android version of our app to the thousands of moms, dad, teachers and librarians who have requested it,” said Melissa Hammersley, Co-Founder and Chief Design Officer. “We are excited to expand on our mission to bring people together using the power of voice through engaging, enhanced experiences that focus on books and reading aloud.”

In developing for Android, Novel Effect solicited feedback from its users for feature improvements and additions and integrated these features into both the Android version and an update of their flagship iOS app, also released today. In addition to the read-along experience users have come to know and love, they will now see:

● Collections – curated lists that make it faster, easier, and more intuitive for readers to find titles that fit with their interests
● My Library – a personalized section where users can create a list of favorite books, access downloads anywhere, and revisit recent reads quickly
● Social Integration – “tap-to-social” functionality that allows readers to share what they are reading with friends, family, and colleagues
● Novel Effect Chime – an introductory sound that plays aloud when Novel Effect is ready for users to begin reading, allowing for a nearly screen-free experience
● Plus, improved search, more robust customer feedback channels, and integrated links to purchase books

The new Android and updated iOS releases also showcase a new branding initiative for Novel Effect, a move that signals their plans to expand their voice-driven technology into new entertainment categories in 2019.

“We had an exciting year on the development front in 2018, pushing the boundaries of our voice-driven technology,” said Matt Hammersley, Co-Founder and CEO. “As we look to debut new products for all age groups in 2019, we wanted to ensure our brand spoke to our progressive, approachable, and playful spirit.”
